BSC COMPUTER SCIENCE  
FIRST-CLASS HONOURS · 2026

01  
PROFILE  
UNITED KINGDOM

I like taking complicated systems and making them feel obvious to use.

I'm a software engineer working across full-stack systems, applied AI and product design. I've shipped a live AI revision platform, delivered production software for a paying client, led a seven-person team and taught a module I had just scored 100% in. I care about reliable outputs, clear interfaces and the unglamorous engineering that makes a product trustworthy.

# Aicademy

AI-powered adaptive revision platform

NEXT.JS · TYPESCRIPT · POSTGRESQL · AUTH.JS · AZURE OPENAI · VERCEL

Built a live platform that transforms a topic or uploaded PDF/DOCX into structured learning paths, quizzes and flashcards, supported by a contextual AI tutor, spaced-repetition review and progress analytics.

- Modelled the relational data layer and strict AI output contracts so generated study material remains reliable, editable and grounded in source documents.
- Validated with 18 users across two rounds: 5.0/5 ease of use, 4.9/5 usefulness and 10 of 12 preferring it to a general-purpose AI tool.

## MotorArc

motorarc.co.uk ↗

PRODUCTION PLATFORM · PAYING CLIENT

Delivered a live dealership platform with an authenticated admin area, vehicle and image management, enquiry capture, PDF brochures and transactional email.

NEXT.JS · TYPESCRIPT · POSTGRESQL · CLOUDINARY · RESEND

## InterviewBot

interview.bydiba.dev ↗

VOICE-DRIVEN AI INTERVIEW COACH

Built a spoken mock-interview tool that listens, transcribes and responds in real time, then returns structured feedback on the answer rather than a generic score.

NEXT.JS · TYPESCRIPT · AZURE OPENAI · SPEECH-TO-TEXT · TEXT-TO-SPEECH · GSAP

## Taskado

SEVEN-PERSON TEAM LEAD · 88%

Led delivery of a full-stack productivity platform, built the task-management flow across the frontend and API, and owned the Git workflow, integration and deployment.

ANGULAR · SPRING BOOT · SPRING SECURITY · POSTGRESQL · DOCKER

## Bug Report Classification

EMPIRICAL ML STUDY · 3,712 REPORTS

Evaluated classifiers across 3,712 reports from five deep-learning projects, improving baseline macro-F1 on every project with statistically significant gains across 30 runs.

PYTHON · SCIKIT-LEARN · TF-IDF · LOGISTIC REGRESSION

 MORE WORK ON GITHUB ↗

# Three things I keep coming back to.

Build it, then let real people break it.

Aicademy went through two rounds of user research. The second version exists because the first one was wrong in places I could not see on my own.

If I cannot explain it, I do not know it.

I scored 100% in Functional Programming, then spent a term teaching it. Explaining recursion to someone else is where you find out what you actually understood.

Most of what I know, I taught myself.

Unfamiliar tooling is a scheduling problem, not a barrier. I would rather read the docs and ship something rough than wait until I feel ready.

EXPERIENCE & EDUCATION

EXPERIENCE

SEP – DEC 2025

Undergraduate Teaching Associate

University of Birmingham · Functional Programming

Supported second-year Haskell labs and office hours after achieving 100% in the module, explaining recursion, type systems and higher-order functions to mixed-experience groups.

2021 – 2024

Customer-facing roles

Worked across Clinique, Tesco, McDonald's and hospitality while studying full-time — practical experience in communication, reliability and fast-paced teamwork.

EDUCATION

SEP 2023 – JUL 2026

BSc (Hons) Computer Science

University of Birmingham · First-Class Honours

Overall average of **75.6%**. Highlights include Functional Programming (**100%**), Team Software Project (**88%**), Machine Learning (**82%**), Security & Networks (**81%**) and Artificial Intelligence (**80%**).

2020 – 2022

A-Levels

Great Marlow School

Mathematics (**A\***), Further Mathematics (**A\***) and Computer Science (**A**)

TECHNICAL PRACTICE

LANGUAGES

TypeScript, JavaScript, Python, Java, SQL, Haskell and C

AI & MACHINE LEARNING

Azure OpenAI, LLM application design, document grounding, strict output contracts, STT/TTS and scikit-learn

DELIVERY

Git, GitHub Actions, Docker, Vercel, Cloudinary, Resend, Linux and CI quality gates

PRODUCT ENGINEERING

React, Next.js, Angular, Vue.js, Tailwind CSS, Node.js, Express, Spring Boot and REST APIs

DATA & ACCESS

PostgreSQL, MySQL, Prisma, Supabase, Auth.js, OAuth, JWT and role-based access control

DESIGN PRACTICE

Figma, responsive interface design, accessibility, user research and interaction polish

SECURITY FOUNDATION

Built into the product work.

Practical coursework covered reverse engineering, binary patching, buffer-overflow exploitation and dynamic analysis across x64 and ARM. Product work includes OAuth, JWT, role-based access control, server-side validation, secrets management and CI quality gates.
