FIRST-CLASS HONOURS · 2026

01

PROFILE

📍 HIGH WYCOMBE, UK

I like taking complicated systems and making them feel obvious to use.

I'm a full-stack and AI engineer, and most of what I know I taught myself by building. I've taken an AI learning platform from a final-year project to a live product that takes payments, delivered software for paying clients and led a seven-person team. I care as much about how something is built as what it does, which usually means the unglamorous engineering that makes a product trustworthy and maintainable.

SELECTED WORK

2024 - 2026

Aicademy

AI-powered study workspace

NEXT.JS · TYPESCRIPT · POSTGRES · AUTH.JS · AZURE OPENAI · VERCEL

Built a platform that turns a topic or uploaded PDF/DOCX into structured learning paths, quizzes and flashcards, with a contextual AI tutor, spaced repetition and progress analytics.

- Modelled the **relational data layer** and **strict AI output contracts** so generated study material remains reliable, editable and grounded in source documents.
- Validated with **18 users** across two rounds: **5.0/5** ease of use, **4.9/5** usefulness and **10 of 12** preferring it to a general-purpose AI tool.

MotorArc

motorarc.co.uk [↗](#)

PRODUCTION PLATFORM · PAYING CLIENT

Delivered a live dealership platform with an authenticated admin area, vehicle and image management, enquiry capture, PDF brochures and transactional email.

NEXT.JS · TYPESCRIPT · POSTGRES · CLOUDINARY · RESEND

InterviewBot

interview.bydiba.dev [↗](#)

VOICE-DRIVEN AI INTERVIEW COACH

Built a spoken mock-interview tool that listens, transcribes and responds in real time, then returns structured feedback on the answer rather than a generic score.

NEXT.JS · TYPESCRIPT · AZURE OPENAI · STT/TTS · GSAP

Taskado

7-PERSON TEAM LEAD · 88%

Led a seven-person team, delivered around 44% of commits across the front end and API, and introduced branch protection and review after broken code reached main.

ANGULAR · SPRING BOOT · SPRING SECURITY · POSTGRES · DOCKER

Bug Report Classification

EMPIRICAL ML STUDY · 3,712 REPORTS

Evaluated classifiers across 3,712 reports from five deep-learning projects, improving baseline macro-F1 on every project with statistically significant gains across 30 runs.

PYTHON · SCIKIT-LEARN · TF-IDF · LOGISTIC REGRESSION

04 HOW I WORK

Three things I keep coming back to.

01

I would rather say no than fake a yes.

My first production site was for a tyre service. A rival gave blanket availability for any postcode, and I was told to do the same. I used **real postcodes**, drew a **coverage boundary**, and **let it say no**. It still brings in calls.

02

I have started from zero every time.

I had not written **Java** when I led my first full stack project. Or **Next.js** when I built the AI interviewer. Or an **authentication system** when I planned Aicademy. I expect the next one to be the same.

03

I get to the pattern before I know its name.

I split InterviewBot into a planner, an interviewer and a reviewer. Aicademy breaks an upload into sections and assigns each to the lessons that need it. I built both before I connected them to **multi-agent workflows** and **RAG**.

EXPERIENCE & EDUCATION

EXPERIENCE

SEP – DEC 2025

Undergraduate Teaching Associate

University of Birmingham · Functional Programming

Supported weekly Haskell labs and office hours for second-year students, explaining recursion, type systems and higher-order functions to groups with mixed experience.

2021 – 2024

Customer-facing roles

High Wycombe

Retail and hospitality alongside full-time study, including counter sales at Clinique.

EDUCATION

SEP 2023 – JUL 2026

BSc (Hons) Computer Science

University of Birmingham · First-Class Honours · 76%

Highlights include: Functional Programming (100%), OOP (90%), Team Project (88%), Full Stack Development (87%), Data Structures & Algorithms (83%) and Machine Learning (82%).

2020 – 2022

A-Levels

Great Marlow School

Mathematics (A*), Further Mathematics (A*) and Computer Science (A).

TECHNICAL PRACTICE

PROGRAMMING

TypeScript, JavaScript, Python, Java, C#, SQL, Haskell and C

AI & MACHINE LEARNING

Azure OpenAI, LLM application design, RAG, structured outputs, STT/TTS and scikit-learn

DELIVERY

Git, GitHub Actions, Docker, Vercel, Stripe, Cloudinary, Resend and CI quality gates

SECURITY FOUNDATION

Built into the product work.

Practical coursework covered reverse engineering, binary patching, buffer-overflow exploitation and dynamic analysis across x64 and ARM. In production that means role-based access control, server-side validation and secrets management.

PRODUCT ENGINEERING

React, Next.js, Angular, Vue.js, Tailwind CSS, Node.js, Express, Spring Boot and REST APIs

DATA & ACCESS

Postgres, Prisma, Supabase, Auth.js, OAuth, JWT and relational data modelling

DESIGN PRACTICE

Figma, responsive interface design, accessibility and user research
